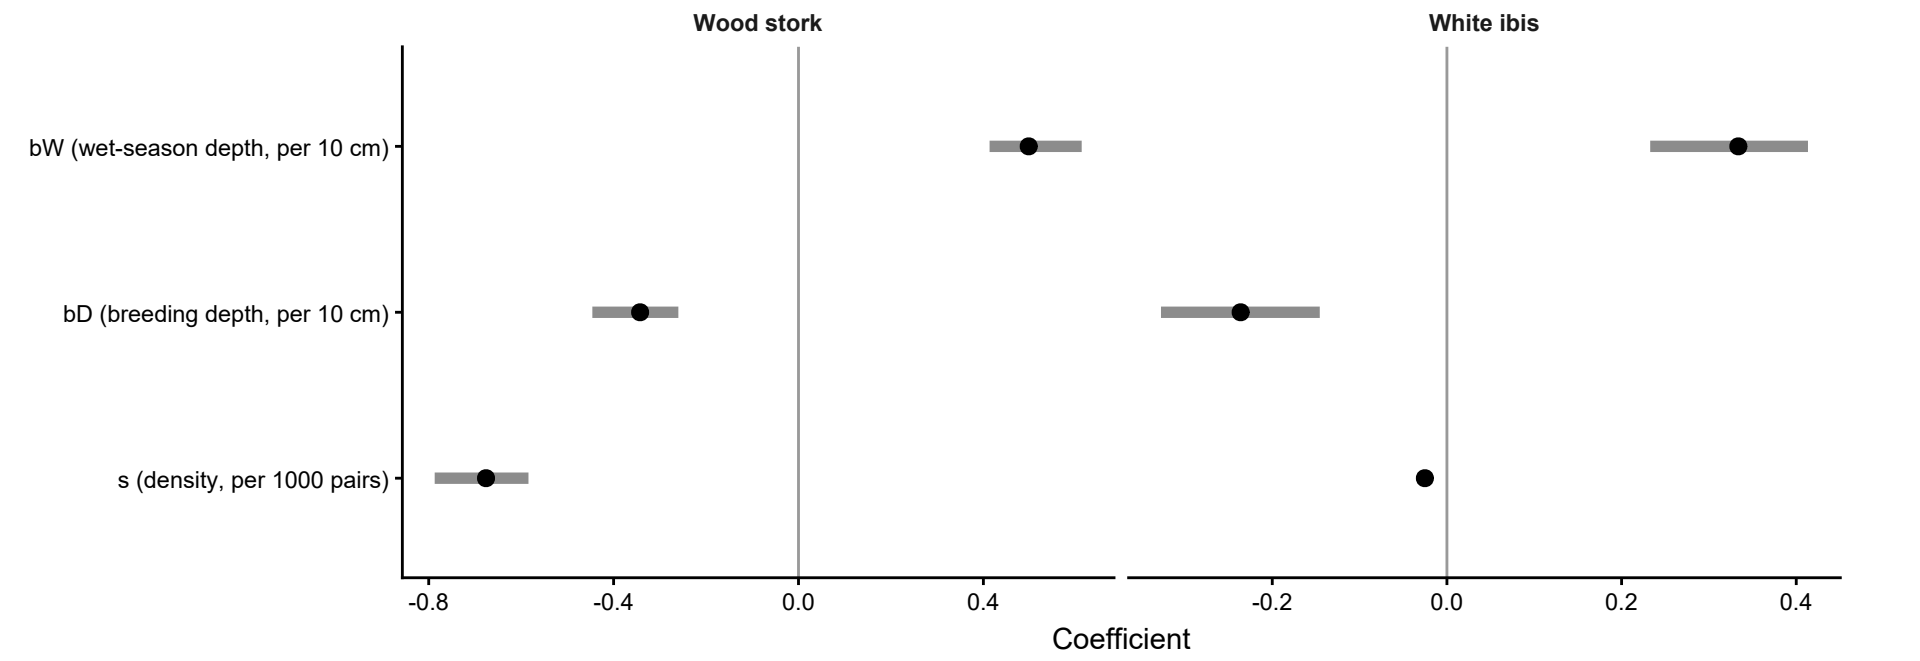
Core GLMs
Breeding-season depth
Previous wet-season depth
Main model
R1: no trend
R2: + density dependence
R3: leave one year out
Wood stork
White ibis
0.7
1.0
2.0
Rate ratio per +10 cm (log scale)



r + sN model: leave-one-transition-out range (bar) and full-data estimate (point)
Wood stork
White ibis
bW (wet-season depth, per 10 cm)
bD (breeding depth, per 10 cm)
s (density, per 1000 pairs)
